

University of the Sunshine Coast (オーストラリア)

Lauren: Hi. My name is Lauren Zeglio. I'm currently in my third year of study at the University of the Sunshine Coast, also known as USC Australia, majoring in animal ecology. I'm going to show you around the USC campus. Hopefully you'll be able to see how great it is to study here!

USC is located on the Sunshine Coast in the state of Queensland, Australia. It's about a one-hour drive north from Brisbane. Usually, the Sunshine Coast enjoys more than 300 sunny days a year. It's sometimes warm enough outside for you to only wear a T-shirt, even in winter! The Sunshine Coast region is a popular destination for Australians, but also for Europeans.

Behind me is one of the main buildings on campus. As you can see, our campus is very modern. There are about 18,000 students studying at USC. Of them, about 2,500 are international students.

This is one of the largest lecture theaters. It's equipped with the latest technologies. Some of the lectures are recorded in case you want to review them later. The university also offers various facilities designed for specific purposes. For example, you can create 3D images at this studio using the 360-degree screens.

The library is a place where you can find all the books and resources you need to successfully complete your assignments. You can use one of the many computers in the library. The study section is open 24/7.

If you ever need a break from your studies, you can get a coffee or something to eat at one of our cafés or shops. You can get an affordable and healthy meal at our dining hall, the Brasserie. The burrito from the Brasserie is one of my favorites. It's really good.

We even have kangaroos at USC. Because USC is surrounded by nature, wild animals like kangaroos often visit the campus. In fact, grass, trees, nature and kangaroos are symbolic to the university.

There are so many student accommodation options. Some of them are only a five-minute walk from the USC Sunshine Coast campus. This is one of the privately-owned student accommodation complexes, Uni Central. It has a swimming pool, tennis court, and basketball court.

Hi. This is my friend, Kane. Kane, can you show us your room?

Kane: Sure, come in.

Lauren: The room has a bathroom, a bed, and a desk. There's a kitchen that we share and a lounge to relax and watch TV. Kane, how is it like living here?

Kane: It's nice. It's quiet in here so I can focus on my assignments. And also people are really nice. So if I want to have a break and when I go to the lounge, I can talk to my roommates.

Lauren: This is the science building where I study animal ecology. We look at how the environment and human interaction impact animals and think about what we can do to protect them. From your first year, you get fieldwork experience in the local region. You get to go on field trips and work with leading researchers on their laboratory research.
Hi, Chris!

Dr. Clemente: Hi, Lauren! How are you?

Lauren: I'm good, how are you? I have a question for you. Why do you think we should study animal ecology?

Dr. Clemente: Well, animal ecology is the study of animals and their environment, and by studying animal ecology, we can better conserve them for our future.

Lauren: Well, I guess that's it for now. I really hope you enjoyed this video.

There's so much more that I want to tell you about USC. We hope to see you soon here at the university campus in the near future. Bye for now!
